

Collected to determine baseline behavior rates and also after BIP implemented to monitor effectiveness

TRAINING: Behavior Reduction Data Sheet – Frequency

Client: Client Acronym
BI: Direct Care Staff

Date: Date of Treatment

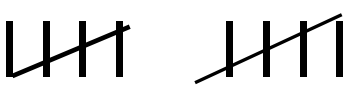

Data Collection Start Time:
Data Collection End Time:

Not
Session

Directions

Use one sheet per session or data collection episode within a session. Follow the direction of your PS/CM to choose **either** frequency **or** duration data for a behavior excess targeted for reduction. Flip this page over for duration data. For frequency, tally the number of occurrences as defined by the BIP and then divide by the total data collection time.

Frequency Data

Target Behavior	If the behavior you are recording is reflected in a BIP already, use the target behavior label identified in the BIP.		
Count of occurrences	If the behavior is still under assessment, capture the ABC data for this observation also and use a few words to describe on this data sheet.	Total Count	
		# Minutes of Data Collection	
		Frequency (Count/Minutes)	___ /minute
Target Behavior			
Count of occurrences	The number of discrete occurrences or number of episodes depending on the observed behavior. Episode = has beginning, middle, end	Total Count	
		# Minutes of Data Collection	
		Frequency (Count/Minutes)	___ /minute
Target Behavior			
Count of occurrences	Count is what makes this sheet a frequency data sheet and not a duration data sheet.	Total Count	
		# Minutes of Data Collection	
		Frequency (Count/Minutes)	___ /minute
Target Behavior	Kicking objects		
Example Count of occurrences		Total Count	10
		# Minutes of Data Collection	60
		Frequency (Count/Minutes)	.17 /minute
Target Behavior			
Count of occurrences		Total Count	
		# Minutes of Data Collection	
		Frequency (Count/Minutes)	___ /minute

Behavior Reduction Data Sheet – Duration

Client: Client Acronym

BI: Direct Care Staff

Date: Date of Treatment

Data Collection Start Time:

Data Collection End Time:

Start/ End

Directions

Use one sheet per session or data collection episode within a session. Follow the direction of your PS/CM to choose **either** frequency **or** duration data for a behavior excess targeted for reduction. Flip this page over for frequency data. For duration, write unit of measurement (usually seconds or minutes) in the “measured in” box. Then write the duration of each separate occurrence as defined by the BIP in the space provided.

Duration Data

Target Behavior				Measured in	
Duration of each episode	<i>If the behavior you are recording is reflected in a BIP already, use the target behavior label identified in the BIP.</i> <i>If the behavior is still under assessment, capture the ABC data for this observation also and use a few words to describe on this data sheet.</i>				<i>Specify Unit of Time</i> <i>Seconds, Minutes, Hours</i>
Target Behavior				Measured in	
Duration of each episode	<i>Duration is generally used for episodic behavior and frequency for discrete behaviors.</i>				
Target Behavior	Verbal Outburst (see BIP for operational definition)			Measured in	Minutes
Example Duration of each episode	Start	End		Total =	
	10:23	10:28			5
	11:07	11:19			12
	11:40	11:54			14
Target Behavior				Measured in	
Duration of each episode
