ADAPTIVE BEHAVIOR ASSESSMENT

If Vineland-3 Update Not Completed, please provide rationale and timeline for completion:

Click or tap here to enter text.

Vineland Adaptive Scales, 3rd edition was used to assess the individual's adaptive behavior functioning. The standard scores reported have an average of 100 and a standard deviation of 15. Age-equivalents indicate the average age of the individual from the Vineland-3 normative sample who obtained the same raw score as the individual currently being assessed. Adaptive levels are scored on a 5-point scale from Low to High.

Individuals over the age of three will include Maladaptive Behavior Index (MBI).

All coordination of care efforts should be outlined in this section.
