

Skill acquisition goals are based on current and appropriate standard curriculum-based assessment (e.g., criterion referenced assessment; not parent concern/Vineland). The assessment cited as a goal source should be administered (and results included) as part of assessment and each reassessment. For example, the curriculum-based assessment is administered at assessment, goals are based on the missing skills/skill deficits based on the assessment, and subsequently, the same curriculum-based assessment is conducted at reassessment to determine goal progress. See below suggested criterion referenced assessments.
